Easy to Use - Rocna is a true multi-purpose anchor that sets in all ocean floors without any special tricks, giving maximum versatility.

Instant set - the design of the Rocna Anchor ensures that it lands on the ideal angle for penetration. Rocna's unique chisel tip and weight distribution then combine to ensure a virtual instant set in most sea bed conditions including thick weed and kelp.

Ultra high hold - through careful design the Rocna is able to achieve a greater blade surface area than its competitors. This combined with its concave blades creates a holding power that is best described as outstanding and earned Rocna number 1 for holding power in recent independent testing.
